
State, Role and Prospects of Gymnastics in V4 Countries

Charles University in Prague is an official partner of Gdansk University of Physical Education and Sport during the project: State, Role and Prospects of Gymnastics in V4 Countries.

The aim of the project is to increase public awareness of V4 citizens to health problems arising from 'diseases of affluence' – those resulting from modern life-style, and to show the role of various forms of gymnastics (sport, health, education) in preventing them.

The main part of the project is the International Scientific Conference: Sport, Health & Education – complementary approach to gymnastics. More information can be found at: <http://v4gymnastics.awfis.net/>.

The project: State, Role and Prospects of Gymnastics in V4 Countries is held within the International Visegrad Fund's Standard Grant (<http://visegradfund.org/>)
