
Exchange Students & Erasmus+ Students

- **EXCHANGE INCOMING STUDENTS** are students who come to the Faculty for study stays or internships, based on various programmes or inter-university and inter-faculty agreements.
- **ERASMUS+ INCOMING STUDENTS** are EU-granted exchange students from EU member countries, coming to the Faculty for a study stay (for one or two semesters) or for an internship (staying for 2–12 months). To be considered as an Erasmus+ incoming student to the Faculty, the student's home Faculty or Department must have an inter-institutional agreement with the Faculty of Physical Education and Sport, Charles University, Prague, Czech Republic. Participation within the Erasmus+ student exchange programme enriches students from many perspectives: academic experience, personal development, intercultural competences and language skills. It also increases opportunities in the job market. Information about study at Charles University under the Erasmus+ programme is available at <http://www.cuni.cz/UKEN-145.html>.

For more specific information, students may contact administrators at the Faculty, who offer assistance from the time when students are considering their options to spend their study stay or internship at the Faculty, throughout the preparation phases, to the time of the actual stay at the Faculty, whenever they feel they require information or support, or face difficulties. Erasmus+ students are invited to consult with:

Name	Office	Office number	Responsible for	E-mail
Mgr. Jan Procházka, PhD.	International Students Office	H 063	Erasmus+ study stays	iso@ftvs.cuni.cz
Mgr. Hana Sladkova	International Office	H 105	Erasmus+ internships	international@ftvs.cuni.cz

Study stays

The Faculty offers many theoretical and practical courses for Bachelor and Master Erasmus+ students taught in English, for the areas of **Physical Education and Sport** (including selected courses for Sport Management) and **Physiotherapy**. The Faculty also offers selected courses for doctoral students.

List of courses taught in English:

- [List of courses for all incoming students](#)
- [List of courses for students of Physiotherapy - Bachelor studies](#)
- [List of courses for students of Physiotherapy - Master studies](#)
- [List of courses for students of doctoral study](#)

Important information concerning the courses:

- Courses offered in both terms contain the same activities.
- Courses will be run only with a minimum enrolment of 10 students.
- Some courses have a limited capacity (e.g. outdoor practical courses – usually maximum capacity is 12-14 students; squash and tennis – maximum capacity is 15 students).

Medical Certificate

All exchange students nominated for a study stay or practical placement at the Faculty of Physical Education and Sport of Charles University, Prague, Czech Republic (Erasmus code: CZ PRAHA07) need to have a Medical Certificate from a Sport Doctor, in English or officially translated in Czech language, if they wish to be enrolled in any Practical Course of Sport or Physical Education. In the case of any physical limitation, the teachers must be informed in advance – so that they can decide if the nominated student can or cannot be allowed into their class.

The nominated students need to send the certificate to Charles University together with the paper version of their application. The deadlines are: June 15 (arrivals for winter semester and full year) and October 31 (arrivals for summer semester).

Internships

Many of the Departments of the Faculty offer the opportunity for internships, which are suitable especially for doctoral students who would like to conduct their research in the areas of **Kinanthropology** and **Biomechanics**. Internships may also be interesting for Bachelors or Masters students.

Internships are conditional on the availability of a suitable Departmental host, and adequate content of study.

- **Kinanthropology** focuses on the interdisciplinary study of human movement, with respect to Physical Education, sport, recreation, rehabilitation and physiotherapy. It develops themes such as psycho-social and biological determinants of an active lifestyle, psycho-social functions of physical activities, values and ethics of sport as a part of the quality of life, etc.
- **Biomechanics** concerns questions such as the functional and structural response of the human locomotor system, tissues, organs and organ systems to dynamic stress fields; injury biomechanics, occupational diseases, human-machine interaction, degenerative organism changes, artificial replacements, tissue engineering, identification of loading history, etc.
